

SKILLED NURSING FACILITY

MatrixCare supports faster, more accurate MDS data.

Your Minimum Data Set (MDS) coordinator plays a vital role in your facility's success. The data they collect and submit is a key element in performance and compliance evaluations—and ultimately affects your residents' quality of care.

SKILLED NURSING FACILITY

MatrixCare includes user-defined assessments that can be answered by floor staff for enhanced data accuracy, which saves MDS coordinators time.

Easy access to a resident's entire clinical record ensures all questions are answered effectively and efficiently.

Key features include:

- Assessment forms created as Observations or Events can be built using MDS questions. These observations and events can be used to pre-fill MDS questions allowing for quick and easy entry.
- Third-party interface with MDS analyzer programs allows you to send data to third-party vendors with one click. These vendors send back an analysis report of the MDS which you can review without leaving the MDS.
- On each MDS form, Prospective Payment System (PPS) or Omnibus Budget Reconciliation Act (OBRA), the Interim Payment Assessment (IPA)

review form is available. This tool allows you to quickly review the impact on PDPM of any changes in a resident's condition.

- MDS questions in MatrixCare identify how data from individual questions are used. Questions are flagged for Care Area Assessments, Resource Utilization Groups (RUGS), Patient driven payment model (PDPM) and Quality Measures. The MDS answers related to Care Area Assessment will pre-fill to CAA forms as they are created.

With MatrixCare, completed MDS data auto-populates forms for facility matrix and resident census and conditions reports. The same data is also used for quality measuring and reporting programs, streamlining report submissions and eliminating duplicate documentation.

The automation that MatrixCare offers can help your MDS coordinator work more quickly and accurately.
