Our easy-to-use workflow helps you analyze and manage claims.

Everything you need is in one place. An extensive and robust library of standard reports and customization options helps you create your own user-defined reports. Access to historical data—both financial and operational—allows you to examine root cause and identify trends. True visibility into all that data helps streamline your revenue cycle processes. And finally, our solution combines several sources of data providing you an organizational-level view of your business.

Today's healthcare systems are overburdened by the sheer amount of data from compliance, quality, payer, and interoperability initiatives. And because many providers use internal technologies unique to their organizations, the process of accessing and analyzing that information becomes difficult. This ultimately complicates any efforts to assess, adjust, or optimize operations.

Most entities want to identify the top reasons that claims are being denied, what the cost is to the organization, and what can be done to remedy the situation. It's also important to identify the days to claim payment at the payer level across the organization, which payers are the worst performers, and which are having the highest revenue impact. And finally, are the claims quality reporting measures that CMS is tracking all easily accessible?

MatrixCare Claims Management Acuity Analytics™ is a web-based application built for MatrixCare Claims Management users, analysts, business office managers, leadership, and executives to provide secure access to reports from Claims Management data. Key benefits include access to both claims and remit data to identify:

• Key Performance Indicators (with all KPIs accessible through the executive dashboard).

• Trends across your care settings, or claims management CIDs.

• Performance of both employees and payers.

With the MatrixCare solution, information is standardized, customizable, schedulable, and highly visual. And with reporting available for over 1500 data elements, organizations can apply real data to drive smart, timely, effective decisions.

If you've identified a key problem area in your cash flow and billing cycle, get in touch with us. We can schedule a demo to show you how Claims Management Acuity Analytics can improve your business.
