4 ways to drive better patient care with Clinical Advanced Insights

By accessing millions of data points within the Skilled Nursing EHR database, coupled with intelligent algorithms, Clinical Advanced Insights helps customers prevent falls and costly rehospitalizations, and reduce reimbursement penalties, or litigation.

Some customers have decreased falls by **50-100%***

Annually, fall prevention can help nursing homes save **$50+ billion**

*Based on machine testing and clinical pilot feedback. Results may vary.

1 Predict falls using smart technology

Falls can cost up to $35K per incident. Prevent costly rehospitalizations by predicting falls based on more than 150 clinical data elements, including resident demographics, diagnoses, assessments, medications, vitals, and daily living data.

2 Proactively monitor changes in condition

Easy-to-use dashboards and alerts allow staff to see the status of every floor, wing, and resident in real time, so they can quickly note changes in condition and proactively intervene.

3 Have more time for residents

Give staff the tools they need to work more efficiently, putting real-time clinical data at their fingertips and eliminating the need to run multiple reports or sift through charts and data tables.

4 Track results to see what's working

Monitor your progress, spot trends, and identify areas of improvement so you can effectively manage costs and risks while providing the best possible care for your residents.
