Smarter connections for stronger care outcomes

Across skilled nursing facilities, senior living communities, life plan communities, home health, and hospice, interoperability supports better care outcomes for seniors by changing how care is coordinated and delivered.

What gets in the way of great care → When interoperability is in place

What gets in the way of great care

- Slow, manual data entry
- Limited access to critical patient info
- Delays that affect admissions and readmissions
- Staff stress and inefficient communication

When interoperability is in place

- Critical info can be shared with clinicians, residents, patients, and families for better collaboration
- Teams can spend more time with patients or residents and less time chasing charts
- Admin burdens are reduced, and referral relationships improve
- Teams can maximize consistency and safety in transitions of care

According to 109 referral sources, across 600+ post-acute care organizations

90%
believe interoperability can reduce admin burden and improve outcomes

99%
say strong interoperability is key for value-based care and risk sharing models

93%
would likely send more referrals to providers who receive orders electronically

92%
believe their post-acute care partners must improve interoperability in 1–2 years

How it's making a difference in post-acute care

- Better resident/patient outcomes
- More referral relationships
- Improved resident satisfaction
- Reduced admin burdens
- Enhanced operational efficiency

Interoperability is more than a feature.

It's a smarter way to coordinate care and give time, clarity, and connection back to those who matter most. Contact us at **866.469.3766** or visit **matrixcare.com** to request a consultation or to learn more.
