

MyScrubber: Clarity and confidence in every assessment

**Technology that transforms the way
your agency manages performance**

The OASIS tool continues to evolve to meet the shifting requirements of the 2014 IMPACT Act, helping home health agencies capture and report standardized patient assessment data across post-acute care. But with quality assurance teams still battling documentation inconsistencies that can impact compliance, quality scores, and reimbursement, agencies need smarter ways to stay ahead.

MatrixCare brings together analytical and quality assurance tools to help reduce errors, elevate assessment accuracy, support compliance, and strengthen financial performance, turning everyday documentation into meaningful, actionable insight that drives better outcomes.

MyScrubber Clinical

MyScrubber Clinical is a powerful scrubbing tool that can help identify potential and known errors within and between OASIS assessments, analyze patient data in real time, and streamline quality review processes, supporting efforts to improve documentation accuracy, compliance, outcomes, and reimbursement.

How it works

- > Clinicians can perform OASIS scrubbing on the iPad, whether connected or offline
- > No internet connection is needed to scrub or update assessments
- > All alerts and recommendations appear directly within the assessment for quick, easy review
- > Clinicians can accept or decline recommendations in ways that support efforts to meet regulatory requirements
- > Guidance can help clinicians develop consistent and accurate documentation practices
- > Multiple workflow preferences are supported, allowing review by full page or by assessment section
- > Color-coded alerts, ordered by severity, can help clinicians prioritize what needs attention
- > Icons highlight areas of impact to help clinicians surface what matters most to the agency
- > Clinicians can access detailed patient reports that include alerts, recommendations, and data-driven analysis across visits, scoring, payment, medication, and diagnosis information

MyScrubber QA

MyScrubber QA is a quality assurance tool that helps agencies complete comprehensive OASIS assessment reviews, supporting efforts to improve performance, CMS compliance, review workflows, and touch points between QA and assessing clinicians to help shorten review time and strengthen OASIS submission efficiency.

How it works

- > Integrates with the iPad point-of-care device to support accurate documentation in real time
- > MyScrubber Clinical edits flow directly into the QA review process to help teams prioritize and respond more quickly
- > Recommendations can be made based on scrubber results
- > Users can see the potential financial impact of their recommendations
- > Quick, easy access to key patient information
- > Supports efforts to comply with regulations and submit clinically accurate OASIS documentation
- > Can help minimize QA review time and support greater productivity
- > Day-to-day reporting is available

Why it matters for your agency

MyScrubber Clinical and MyScrubber QA each offer strong, purpose-built features—and when used together, they create a unified analytical and quality assurance approach that can help agencies work smarter across post-acute care.

For home health agencies looking to strengthen their quality review process and adapt to changing OASIS documentation requirements, MatrixCare MyScrubber QA technology and services can help support:

- > More time for clinicians to focus on patient care
- > Quality assurance workflows
- > Ongoing education and documentation consistency
- > Efforts to maximize reimbursement
- > High-quality, consistent documentation

Connecting OASIS, coding, and RCM

MyScrubber Clinical and MyScrubber QA give agencies the ability to streamline OASIS and coding review processes, helping clinicians have more time with their patients.

MatrixCare also offers revenue cycle management services (including OASIS review, coding, and billing), CAHPS survey support, and advanced analytics for post-acute care organizations. These offerings can help support compliance efforts and minimize common challenges around coding, billing, and survey management so agencies can focus on delivering patient care and ongoing initiatives.
