

MyScrubber QA: Smarter OASIS review and diagnosis coding

**Streamline QA workflows and
bring clarity to every assessment**

MyScrubber QA is a quality assurance tool that helps organizations complete comprehensive OASIS assessment reviews by identifying potential inconsistencies within and between assessments and aligning documentation with a patient's medications and plan of care.

It reduces the need for manual checks and minimizes the touch points between QA teams and assessing clinicians, helping shorten review time and support more efficient OASIS submissions.

How it works

Designed to strengthen documentation accuracy and assist with CMS compliance efforts, MyScrubber QA streamlines quality review processes and can help agencies collect accurate patient data, complete thorough assessments, support better outcomes, and appropriately maximize reimbursement.

- > Integrates with both mobile point-of-care and MyScrubber QA
- > Provides consistent, timely review support
- > Incorporates MyScrubber Clinical edits in real time, highlighting alert severity for quicker prioritization and identifying areas of impact such as process measures, avoidable events, reimbursement considerations, and other key indicators
- > Surfaces mismatches across OASIS, the plan of care, VBP measures, STAR ratings, coding details, HHC information, and regulatory alerts, and shows where improvement or decline may occur
- > Supports efforts to maintain regulatory compliance and submit clinically accurate OASIS documentation
- > Provides quick access to key patient information
- > Supports recommendations based on scrubber results and shows the potential impact of those changes, including visibility into the possible financial impact as calculations update
- > Can help minimize QA review time and support more efficient staffing
- > Offers day-to-day reporting
- > Includes analytics through MyAnalytics

Key features and benefits

Task list/dashboard

This main landing page displays assessments available for review. Reviewers can filter this view to support their workflow, complete timely reviews, and quickly see completion and received dates, assessment type, clinician name, patient name, MR number, and status.

Integrated review process

Scrubber results flow directly into the review process. Reviewers can filter the display to match their workflow and access key patient information to help them make appropriate recommendations, including:

Financial impact: Users can view financial information based on clinician answers and recalculate values as recommendations are made to see how changes may affect reimbursement.

Additional functions toolbar: A toolbar in the top-right corner gives users access to functions that support and complete the review process.

Alerts by severity: Users can filter and review alerts by severity or clinical category.

Areas of Impact: Icons highlight how each alert affects key agency areas such as process measures, avoidable events, or reimbursement considerations.

Completing a recommendation: During review, alerts are color-coded by severity and display their Areas of Impact. Users can view the full alert message, see the clinician's original response, and enter a Recommendation Note.

Medications/diagnoses: Reviewers can access active medications and diagnoses to ensure recommendations reflect all pertinent patient data.

Day-to-day reporting: The Reports tab helps the review team manage daily workflow through multiple filters that show status and progress. As reviews are completed, data flows to the analytics team for additional reporting.

Make your next assessment review more efficient

Accuracy and efficiency in OASIS review and diagnosis coding are essential to supporting quality outcomes and appropriate reimbursement. Home health agencies need consistent assessment reviews and timely QA turnaround to stay compliant and meet regulatory submission guidelines.

MatrixCare helps support compliance efforts and minimize common challenges in OASIS review and diagnosis coding, so agencies can keep their focus on patient care and ongoing initiatives.

Contact our experts at 866.469.3766 or visit matrixcare.com to see how MyScrubber QA can help your agency improve accuracy, reimbursement, and patient care.
