

Speed up documentation with MatrixCare Voice Pro

What if documentation could keep up with the way clinicians think and work?

MatrixCare Voice Pro transforms clinical documentation from a time-consuming task into a seamless, intelligent experience. By enabling clinicians to capture notes naturally with their voice, it helps reduce time spent typing, minimizes after-hours charting, and keeps the focus on patient care.

Fast clinical dictation:

- > **Voice dictation across MatrixCare:** Dictate naturally into any free text field to help reduce manual typing.
- > **Flexible input options:** Switch seamlessly between voice and a fully functioning keyboard to discreetly capture sensitive information.
- > **Medical language tuned for home-based care:** Recognize diagnoses, medications, acronyms, and clinical phrases commonly used in home health and hospice.
- > **Care-specific voice commands:** Support accurate capture of measurements, vitals, wound dimensions, numeric values, and clinical units through voice.

Smarter medication capture (Medication Assist)

- > **Enter medication information with voice or images:** Document medications from bottles, lists, and other source materials with less manual entry.
- > **AI-assisted data extraction:** Automatically convert medication information into structured fields, including medication name, dosage, route, and frequency.
- > **Built-in review and validation:** Review, edit, and confirm extracted information before completing medication orders.
- > **Faster admissions workflows:** Help reduce administrative burden and streamline medication documentation within MatrixCare Voice Pro.

Agency-level accuracy and customization:

- > **Local vocabulary and terminology:** Upload agency-specific terms including clinician names, physicians, facilities, and regional references.
- > **Role-aware configuration:** Tailor vocabularies, templates, and assist tools by discipline to reflect how each role documents care.

Clean, structured, QA ready notes:

- > **Clean and format tool:** Automatically apply punctuation, correct grammar, and organize dictated text for clinical readability.
- > **Structured note generation:** Convert free text narratives into standardized formats that support QA review and audit workflows.

Real-time documentation coaching:

- > **Note assist and check:** Gain real-time guidance on documentation completeness based on agency-defined requirements.
- > **Configurable audit tool:** Align note prompts with internal policies, clinical standards, and payor expectations.
- > **Built-in coaching tips:** Get contextual guidance while clinicians document, helping reduce downstream QA rework.

Templates and smart reuse:

- > **Voice-activated templates and phrases:** Insert frequently used language, such as COVID screening, SOC elements, or visit summaries, using simple commands.
- > **Skillset-based assignment:** Help ensure clinicians see templates and assist tools relevant to their role and discipline.

Onboarding and workforce support:

- > **Embedded cue cards and educational prompts:** Support onboarding, float staff, and new graduates with in-workflow guidance.
- > **Reduced training burden:** Help bring clinicians up to speed faster while maintaining documentation quality.
